

Abstract

A housing for receiving a cable drum of an adjustment
5 device for a motor vehicle which comprises a peripheral
surface with guide means for a tractive means encircling
the cable drum. The housing comprises a bearing point for
rotatably mounting a cable drum, at least one wall of the
housing which encompasses the cable drum along the
10 peripheral surface thereof when said cable drum is mounted
in the housing, and a securing element which is arranged in
the region of the wall of the housing and which serves to
secure a tractive means, extending along the peripheral
surface of a cable drum to be mounted in the housing. The
15 securing element is elastically configured and may be moved
by deformation in the radial direction in relation to the
bearing point.
